About Signature Systems Group

Signature Systems Group is the world's largest manufacturer of portable flooring and temporary roadway and access systems in the world. Our fencing division manufactures all types of barricades and event fencing for facilities worldwide. In addition to our EventDeck® Ice and ArmorDeck™ Ice arena systems, we offer a complete line of modular flooring for a variety of other applications, including tent floors, military access floors, stadium flooring and ground protection mats.

We are experts in manufacturing specialty modular flooring for all types of sports facilities and venues, including ice arenas, stadiums, and other high profile locations.

Our knowledgeable team has national and international experience at some of the world's most prestigious events and venues, including the Olympic Games, the Asia Games, The New Jersey Devils, The Cincinnati Bengals, the Baltimore Ravens, and numerous other professional sports organizations and venues.

Our popular Ice Arena flooring systems have been purchased and used at facilities worldwide, including ice arenas in the United States, Canada, Russia, and even Dubai.

All of our portable flooring systems have proven themselves through regular and rigorous use and are backed by multi-year guarantees. We take pride in our high-quality manufacturing process and stand behind our products and our customers.

At Signature Systems Group, we are constantly striving to improve our service to you — our customer and most valuable asset. We welcome any feedback or suggestions based on your experiences and pledge to work closely with you and your team on all of your unique needs and projects.

Looking to convert your ice arena into a multi-use facility?

Imagine having the option of converting your skating or hockey rink into a true multi-purpose venue for concerts, trade shows, and various other special events. EventDeck Ice and ArmorDeck Ice arena flooring allows you to do just that, creating additional revenue streams throughout the year. Signature's ice rink cover systems enable you to quickly and efficiently protect your ice while hosting a variety of special events.

EventDeck Ice is the industry-leading temporary ice arena flooring used worldwide at all levels of skating rinks, and ArmorDeck Ice is the premier heavy-duty ice rink con-

version cover. These products are uniquely designed to protect your ice against damage from special events and to create a clean and seamless surface that is safe and attractive. Our modular ice rink covers' durable construction and unique designs can handle the heavy moving weights associated with dasher board glass, staging, event equipment and forklifts, and will not warp, rot, crack, fade, or delaminate.

When installed, Signature's portable ice arena flooring forms the perfect base for seating, staging, game courts, and people, and can be molded in custom colors to tie

into the existing colors of your facility. Carpet and turf can be safely taped or stapled directly onto the modular floor for more formal affairs.

Signature Flooring's standard of quality and complete customer support

When you purchase an ice arena cover system from Signature, you know that you are backed by the world's largest stadium, arena, and special event flooring company. More importantly, you will have access to a team of professionals that understands ice rinks, has actually installed floors in the most prestigious arenas and accommodates your specific needs. In this regard, we offer free supervision on most domestic installations and will send a qualified installer anywhere worldwide for a minimal fee. This supervisor will instruct you on the proper use, installation and removal of your temporary ice rink floor and can advise you on the most efficient means of storage and maintenance. Should any questions remain after your first installation, Signature is always available to answer your needs.

EventDeck

Ideal for any size event, tiles snap together easily without the use of tools. Smooth top provides a uniform look and allows for simple cleaning and maintenance.

Imagine having the option of booking your facility for all types of events, not just skating functions. The EventDeck® Ice arena cover system is the industry's leading ice conversion cover. From basketball games and concerts to trade shows and corporate events, EventDeck Ice (ED Ice) portable flooring will function flawlessly for any occasion and provides the ultimate in flexibility. You can have hockey practice in the morning, a catered lunch in the afternoon, and late night practice in the evening. With the EventDeck Ice arena flooring system the opportunities become limitless, revenue is increased, and your facility can stay busy all year round.

Using a small crew and a simple forklift, a standard ice rink can be covered in less than 2 hours and removed just as quickly. Radiuses are pre-cut and no tools or other equipment are required. Once installed, transport glass carts, basketball floors, dasher board carts, and other equipment move over EventDeck Ice modular flooring with ease.

Rugged System Designed for Durability and Simple Installation

EventDeck Ice temporary ice rink flooring utilizes a unique inter-module connection system that allows sections to be assembled and dismantled quickly, yet is incredibly strong — designed to handle the rigorous payloads (up to 20,000 lbs sq/ft) and traffic that can be expected at any size arena — and capable of being used and re-used again and again.

Unlike other modular flooring systems, Signature's ED Ice actually connects on all sides to create a seamless floor for a variety of activities. Modules can be connected in both directions and at any module connection point, including at a 90 degree angle - allowing for maximum flexibility in floor design. Sections self-align, making installation simple for unskilled workers.

Each EDIce module is 24" x 12" x 1.25" and ships in pre-assembled 3' x 4' sheets for quicker installation. Installation is quick and does not require trained person-

EventDeck Ice Specs

Module Size: 24" x 12" x 1.25" (60.96cm x 30.48cm x 3.175cm)
 Weight: 3.58 lbs (1.62 kgs)
 Material: High impact polypropylene co-polymer. UV inhibitors added.
 Colors: Putty Gray. Custom colors available.
 Weight Loading: 20,000 lbs per sq/ft (97,648 kgs per m2) and provides a perfect floor or sub-floor for any type of event.

nel, special tools or an instruction manual. A full-size ice hockey rink can be installed in under 2 hours using 6-8 workers.

The smooth top surface is designed to prevent liquid and debris from flowing underneath and provides a perfect floor or sub-floor for any type of event.

Beautifies Your Facility & Simple To Clean and Maintain

EventDeck Ice arena flooring is specifically designed to protect the ice rink surface underneath, employing a series of innovative features that truly set it apart from its outdated competition.

First and foremost, each EventDeck Ice flooring system consists of two unique modular sections — a top honeycomb layer and a flat bottom layer. Once assembled, these sections trap air, which provides relevant insulation that keeps your ice cold and attendees' feet warm. Attendees are kept comfortable as ambient room temperature rises once the cover is deployed. You can use your ice arena for all types of non-skating events, including formal dinners, graduations, and other more demanding functions.

The underside of each ED Ice module incorporates a series of circular friction rings which minimize slipping and provide a feeling of quality and stability. Unlike other systems that require the use of walls or other stabilizers, EventDeck Ice remains stationary under forklift traffic and heavy moving loads while "floating" on your ice rink. This feature is especially handy when you need to set up a ceremonial pad in the center of your rink following a game or tournament.

Protects Ice And Will Not Slip And Slide

Because of EventDeck Ice's unique smooth top surface, customizable colors, and seamless finished look, your rink will always look great when covered. Event producers, planners, architects, and designers will be excited about the look and feel that this quality floor provides.

Unlike wooden or fiberboard systems, EventDeck Ice flooring will not warp, rot, crack, or delaminate. ED Ice is impervious to water and other contaminants and is designed to handle temperature fluctuations, moisture, and humidity.

EventDeck Ice's smooth uniform surface makes it very easy to clean, and its lack of ridges, channels, designs, and patterns that trap dirt means it stays cleaner longer. Simply mop or sweep your EventDeck Ice rink floor cover after each event or use a drive-on-floor cleaner for more intense scrubbing.

Suitable for any activity, this heavy-duty large panel system uses side and corner cam locks to maintain a perfectly flat surface under the heaviest weights and moving loads.

Just imagine how you could increase your revenue by holding non-skating events at your ice arena. Concerts, trade shows, graduations, even weddings - without compromising your skating surface? ArmorDeck™ Ice, Signature's premium ice conversion cover system, makes it easy. Designed to handle the heaviest loads and provide the ultimate in stability and ice protection, ArmorDeck Ice is the most advanced engineered ice arena flooring system on the market today. ArmorDeck Ice creates an attractive, yet sturdy surface while protecting the ice beneath.

ArmorDeck Ice is a large panel system that features an integrated connection system with optional side and corner cam locks and unsurpassed liquid spill protection. Each section has a useable surface area of 42" x 42" and is 2" thick, thus providing maximum rigidity and surface protection.

No system has been as comprehensively engineered to handle the rigors of concert and arena use, and no system incorporates the functionality, features, and capabilities of the ArmorDeck Ice system.

Advanced Engineering Offers Self-Aligning Connection System for the Fastest Installs

Unlike other flooring systems, Signature's ArmorDeck Ice features an integrated connection system which is self-aligning and provides ease of installation and tremendous strength.

Sections are simply laid into place and self-align using Signature's proprietary hook-and-loop fastening system, which actually guide panels into place. Panels simply snap into place like giant puzzle pieces. For added strength, sections may be locked together using Signature's plastic cam lock system located on the sides and corners, although in many applications the basic hook-and-loop system will suffice and the cam locks need not be engaged.

The combination of extra large panels with the self-aligning connection system make ArmorDeck Ice the fastest deploying ice arena cover system on the market. A small, unskilled crew can install this modular flooring in less

than two hours.

Handles Heavy Traffic And Payloads

ArmorDeck Ice is designed to handle the heaviest payloads and traffic that can be expected at any sized arena. From concert equipment and staging and basketball floors to glass and dasher board carts, ArmorDeck Ice is designed to withstand up to 45,000 lbs (static) per square foot.

More importantly, ArmorDeck Ice is designed to handle moving weight, which requires a different set of functional features than simple static weights. ArmorDeck Ice will not buckle or bunch up under forklift traffic and the modules' traction design prevents drift and other movement. Unlike older modular systems, ArmorDeck Ice doesn't need to be handled gently. Simply do whatever you would do if your ice were removed - drive, turn, and stop. ArmorDeck Ice can handle the traffic.

Designed To Protect Your Ice and Beautify Your Rink

ArmorDeck Ice arena flooring is specifically designed to protect the ice rink surface underneath, employing a series of innovative features that truly set it apart from its outdated competition.

ArmorDeck Ice is made from the best quality High-Density Polyethylene (HDPE) post-industrial recycled plastic, reinforced with additives for increased strength, flex modulus, and izod impact value.

A bi-directional ribbing system contained within each module - which includes 4 full-height ribs and 5 half-height ribs - distributes heavy weights evenly to prevent shifting or damage to the delicate ice surface.

ArmorDeck Ice panels overlap along the edges, incorporating a specialized containment channel designed to capture stray liquid from spills or mopping, providing the best protection available to your ice.

Each panel has an anti-slip sand-blast finish that is easy to clean using standard cleaning materials such as mops, brooms, and water.

Because of ArmorDeck Ice's unique smooth top surface, customizable colors, and seamless finished look, your rink will always look great when covered.

Event producers, planners, architects, and designers will be excited about the look and feel that this quality floor provides.

ArmorDeck Ice Specs

Module Size: 42" x 42" (1.067m x 1.067m) - useable area
 Weight: 41 lbs (18.6kg)
 Material: High-density polyethylene (HDPE). UV inhibitors added.
 Colors: Light Gray. Custom Pearlescent and other custom colors available.
 Weight Loading: 45,000 lbs sq/ft (219,600 kgs/m²)

Choose THE RIGHT SYSTEM For Your Rink
